The survey results revealed that 78% of first-year students chose a study programme that suits them, receive support from the college/faculty administrative staff when needed, and feel welcomed at the college. The majority of respondents stated that they can consult with lecturers when necessary.

Most students positively evaluated the usefulness of the introductory week and indicated that they have sufficient information about their studies and available services. Approximately 31% of respondents found studying easier than expected, while 32% stated that their expectations were met.

Seventy-two percent of first-year students are firmly determined to continue their studies at Kaunas University of Applied Sciences, 15% had some doubts, and 10% are considering transferring to another higher education institution.

Survey data showed that 26% of first-year students rated their class attendance at 100%, and 54% – between 99% and 76%.

Nearly 49% of students indicated they are combining studies with work, and the same proportion reported having sufficient financial resources to support their studies.

The survey also revealed several areas for improvement in the study process – students highlighted the need for more convenient timetable planning, better lecturer preparedness for classes, and improvements in the relevance and accessibility of study materials. More detailed information about the measures taken in response to student feedback is provided in the “You Said – We Did” section.
